Program Coordinator View

For discussion with Dr. Rover:

Q1

(Intro statement: “*Manage cohorts, track milestones, and keep mentors and students synced. Choose a program to get started.*”)

- Dr. Rover: I saw there’s a milestone section under each program/cohort. Do we feel this section is necessary? Or would it be more useful to reframe as “Tasks” instead? For example, “Tasks: send reminders for students to complete the pre-survey/post-survey”

*Note: “mentors” (we may not need to have this role in MySTEMGrowth)---

Q2

Is “Mentors,

24 active mentors” section should be included in the overview section for PC mainpage view?

Q3

In “Create New Program” - will you update the options in “Term”, or will you allow users to enter term and year as field options?

- Follow-up question: do students’ faculty research mentors need to join this program? Perhaps not, and delete “mentors” related features?

Q4

We may delete all “mentors” related points in MySTEMGrowth app?

- Additional areas: “Create a New Program” - “mentor onboarding”

Q5

For “Add Resource” page: can users add their own labels/categories for “Topic”?

Q6

In a program, we probably don’t need “#% session attendance”, “# milestones this month”, and again “# mentors engaged”

- I do like the Key Workflows, I believe we should keep student roster

- We may not need the “Current Students” in “Key Workflows”?
- Maybe delete “pending updates” - similar point relate to if we need the mentor related features
 - We can go over the details of the student roster with Dr. Rover, (and again) currently I think maybe we don’t need a “mentor”, and I am not sure about “Survey Status” when they might be asked to complete a pre/post survey. There may be chances of having mid-survey in future. Perhaps survey status, for now, can be separated as “Pre-Survey Status” and “Post-Survey Status”?
 - Maybe also delete “communications”
 - Ties back to the purpose of MySTEMGrowth app. We may not need the similar features like Canvas. I am reflecting on the key piece of the story when we use this tool - since the major goals is to have students take the MySTEMGrowth survey, get result(s) so that they understand where they are at in their STEM journey (e.g., relate to STEM research interests, career outcomes, etc.) I do continue to believe adding/editing resources are another key component to keep in the app. I think we don’t need to get their faculty research mentors involved, and send announcements like how we can do that in Canvas. Let’s further discuss with Dr. Rover.

Q7

Do we need “upcoming milestones” and “recent activity”?

*

Would it look better to have a background color for overview for programs (e.g., below “STEM Scholars 2024”, given “Create a New Program” and “Create or Link a Resource” has lighter grey background color.

STEM Scholars 2024

Students
128 enrolled • 92% attendance

Mentors
24 active mentors

Next milestone
Apr 21 — Mentor training session

Actions:

- View program**
- View as student**
- Add resource from library**
- Delete program**

(Positive) Comments:

- I love the aesthetic design and upgrades for this tool - layout, color

- I especially like the different color layout for three functions “view as student, add resource from library, and delete program” (these are not all filled color, outline is a great idea along matching the text color makes them not overwhelming to look at, while I can also see the key “view program” is mostly clicked button)
- I like the “View as student” feature
- I like that you added a quick help guide with bullet points on each page.
